

City Catering

Policy on Genetically Modified Foods

City Catering will not knowingly use any genetically modified materials in the provision of school meals.

To ensure this, food suppliers are required to:

- supply GMO free products to City Catering
- instruct primary producers/manufacturers that food containing genetically modified material will not be acceptable for the product range supplied to City Catering
- confirm, in writing, that all products, supplied to City Catering, are GMO free
- formally notify City Catering of any subsequent changes to GMO-free status

City Catering's Nutritionist will screen all products, prior to testing for customer acceptability.

Any product without a GMO-free statement cannot be considered for use by City Catering.

Exception

*The only exception to the above statement is **Chymosin**, a vegetable-based rennet substitute used in manufacturing vegetarian cheeses.*

Chymosin is made to be genetically identical to the active ingredient (animal rennet) which it replaces.

The use of this product will be labelled accordingly.
